Professional Summary

Computer Science graduate specializing in Big Data Analytics with strong interest in software Development. Skilled in programming, Machine Learning, and Data Analytics with hands-on project experience. Passionate about solving real-world problems using data-driven solutions and AI technologies.

Education

B.Tech – Computer Science & Engineering (Big Data Analytics) 2022 – 2026
SRM Institute of Science and Technology, Kattankulathur CGPA: 8.16 / 10

Skills

Languages & Frameworks: Python (Core OOP), C++, SQL, NumPy, Pandas, Scikit-learn
Data & Analytics: ETL Pipelines, Data Preprocessing, Feature Engineering
Tools & Technologies: Git, GitHub, Docker, Vercel, Postman, Jupyter, VS Code, SDLC, Anaconda, Power BI, Debugging, Web Scraping, REST APIs
Areas of Interest: Software Development, AI/ML, Automation Testing, Data Analytics, Data Science

Experience

Automation Testing Intern May 2025 – June 2025
Alumnus Software Ltd *Kolkata*

- Developed and executed automated test scripts using Robot Framework and Selenium WebDriver, covering functional and regression test scenarios across multiple sprint cycles.
- Identified and located web elements using XPath strategies (absolute, relative, attribute-based, and axis-based), improving test reliability and element targeting accuracy.
- Collaborated with senior engineers to document test plans and track defect resolution using standard issue-tracking workflows.

Projects

GenAI Video Knowledge Retrieval System (LLM + RAG Pipeline) Oct 2025 – Dec 2025

- Built a RAG pipeline that converts educational videos into searchable knowledge bases using FFmpeg and OpenAI Whisper, processing **10+ hours** of lecture content.
- Implemented semantic retrieval with BGE-M3 embeddings and cosine similarity, achieving **top-3 answer accuracy of 91%** on a 500-query test set.
- Integrated DeepSeek/Llama 3 via Ollama to generate timestamp-specific, context-aware answers with low response latency on local hardware.

Crop Yield Prediction Jan 2025 – Apr 2025

- Developed and evaluated predictive models including **Random Forest, Support Vector Machine (SVM), Deep Neural Network (DNN), and LSTM** to forecast crop yield using features such as rainfall, temperature, fertilizer usage, and NPK nutrient levels.
- Performed data preprocessing, feature engineering, feature scaling, and hyperparameter tuning to improve model performance and prediction accuracy.
- Enabled data-driven decision-making for farmers and agricultural stakeholders through predictive analytics and yield estimation.

GoodLife Clinic – Full Stack Healthcare Portfolio (React | Node.js | MongoDB) | Live Demo Jan 2026 – Present

- Engineered a full-stack clinic booking platform using React.js, Tailwind CSS, Node.js, Express.js, and MongoDB, supporting dynamic doctor listings, patient profiles, and real-time appointment scheduling workflows.
- Designed secure RESTful APIs with JWT authentication, appointment slot tracking, duplicate booking prevention, doctor availability management, and CRUD-based patient and admin operations.
- Developed an admin dashboard featuring doctor onboarding, availability control, appointment management, dashboard analytics, and Cloudinary image integration for efficient healthcare data management.

Extracurricular Activities

- Delivered **30+ academic and life-skills sessions** to underprivileged students, improving average class attendance by **18%**.
- Led a team of **15 volunteers** to organise fundraising events, raising resources for learning materials benefitting **100+ students**.
- Contributed to the **Directorate of Hostel Affairs (DHA)** and **Department of Hostel Operations (DHO)**, coordinating cultural, sports, and hostel events while developing leadership, teamwork, and communication skills.
